DETAILED ACTION

Drawings

Figure s 13 and 14 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 13-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 5 is a product claim while claims 13-16, which depend on claim 5, are method of use claims. Mixing method of use claims with product claims is confusing because the metes and bounds of the claim are difficult to determine. It is suggested that Applicant include the material from claim 5 into claims 13-16 and make claims 13-16 into independent claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Shiotani.

Art Unit: 2834

Shiotani discloses a thrust converter comprising (1) a rotary motor for a driving means in combination with a feed screw 13 to provide reciprocating movement, (2) a reciprocating-rotation converting section having movable frame 5, movable support 11 and rotating pulley 19a, (3) a rotation-reciprocating conversion section having rotating pulleys 23, 27 and (4) reciprocating means 31. The reaction force receiving section for supporting reaction force of the rotation-reciprocation conversion comprises rail portion 11a and chuck mounting plate 31.

Allowable Subject Matter

Claims 2-4, 6-12 and 17-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 13-16 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose or teach a thrust converter having a reciprocation movement section, a reciprocation-rotation conversion section, a rotation-reciprocation conversion section and a reaction-force receiving section that are aligned and that have a through hole formed to pass through the center axes thereof as recited in claim 2. The prior art of record does not disclose or teach first, second and third screw members, first and second detent members and a first bearing connected together as recited in claim 3. The prior art of record does not disclose or teach first, second, third, fourth and fifth screw members, first, second and third detent members and a first bearing connected together as recited in claim 6.

Art Unit: 2834

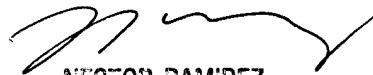

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Japanese references on form 892 were cited by the Japanese Patent Office in the related PCT application PCT/JP00/09321 as being documents defining the general state of the art.
